COLON CANCER AWARENESS Make Plans to "Go Blue" in Your Community in March

March will be Colorectal Cancer Awareness Month, and the UW Carbone Cancer Center and the Medical College of Wisconsin invite you to "Go Blue."

Please consider asking prominent structures, buildings, businesses, or municipal landmarks to Go Blue and join the cause. For success in lighting public landmarks, reach out to the city, county or state's website and submit your request as early as possible. For private buildings or businesses, reach out to the general manager or communications.

Join the Colon Cancer Coalition, Fight Colorectal Cancer, the American Cancer Society, the colorectal cancer community to "Go Blue" on Tuesday, March 7. They also appreciate the support anytime between Friday, March 3 and Sunday, March 12, or any part of March.

To access the full toolkit for Colorectal Cancer Awareness Month, visit the Go Blue link.

CANCER DATA Recruitment Continues for Cancer Experience Registry

The Cancer Experience Registry[™] (CER) is

continuing to recruit cancer patients, survivors, and caregivers to share their stories, concerns about quality of life, access to care, the impact of cancer on work, treatment decision making, and more.

Once 100 cancer patients, survivors and/or 100 caregivers have registered in Wisconsin, a data report can be created. This data will help inform our Wisconsin partners about critical needs for our patients and caregivers and help tailor programs to meet needs in our state.

Please consider sharing the Cancer Experience Registry with your network of individuals impacted by

cancer: <u>https://www.cancerexperienceregistry.org/join/WI</u> (This URL is specific to Wisconsin.)

A promotional **CER Toolkit** is available. Please remember to use Wisconsin's URL in your materials. For more information, please contact Alexandria Cull Weatherer at <u>acull@wisc.edu</u>.

SURVIVORSHIP PROGRAM Time to Heal Survivorship Program

Ascension NE Wisconsin (St. Elizabeth Campus in Appleton) is piloting a Time to Heal Survivorship Program for their patients. This program is a free 9-week class designed to help cancer survivors of any type regain their physical, emotional and spiritual health after treatment. The weekly sessions provide evidence-based advice on topics including nutrition, exercise, building resilience, mental health, and moving forward.

SURVIVORSHIP WORKSHOP Free Cancer Transitions for Young Adults Survivorship Workshop

Gilda's Club Madison will be offering a free virtual cancer survivorship workshop on Wednesdays, from February 28th to March 20th, 6 - 7 pm on Zoom. Cancer Transitions for Young Adults is a free survivorship workshop series designed to help cancer survivors move into the next phase of life with the skills, strategies, and support to empower them. Session topics include goal setting, coping with emotions and building and maintaining relationships, navigating challenges, and medical management in survivorship.

Eligible participants should be within two weeks to 3 years of completing treatment and between 18-35 years old. Participants who meet these requirements, attend all 4 sessions, and complete the evaluation are eligible to receive a \$75 gift card. Those who are interested and 36- 40 years old may still participate, but are not eligible for the incentive.

STUDY

Impact of HPV Vaccine on Cervical Cancer in Public Health Scotland

Scotland recently release a study and news release demonstrating that there have been no cervical cancer cases detected in fully vaccinated women since the implementation of their school-based HPV immunization programs for 12–13-year-olds in 2008. Additionally, women vaccinated at 14 to 22 years of age showed a significant reduction in incidence compared with unvaccinated women. Although this program and the age indications differ from the set-up in the United States, this demonstrates the impact of the HPV vaccine in preventing cervical cancer.

STUDY

Higher Out-of-Pocket Costs for Cancer Patients on High-Deductible Health Plans

In a cohort study of 45,708 patients with cancer, people who had an employer-mandated switch to a high-deductible health plan had substantially increased out-of-pocket medical costs compared to patients who remained in low-deductible plans. The number of oncology visits remained unchanged, but the number of visits with other physicians was lower, indicating possible less comprehensive care for cancer patients on high-deductible plans. REPORT American Cancer Society Releases 2024 Cancer Statistics

The American Cancer Society recently released *Cancer Statistics,* 2024 and its companion document Cancer Facts & Figures 2024, which are annual reports on cancer facts and trends utilizing population-based registries.

The new data show overall cancer mortality has continued to decline since 1991, but progress is threatened by a projected increase in new cancer cases by more than two million cases in 2024. Incidence rates increased: breast, pancreas, uterine corpus cancers, prostate, liver (female), kidney, HPV-associated oral cancers, and melanoma. Incidence rates also increased for cervical (ages 30-44 years) and colorectal cancer (ages <55 years).

Disparities persist for Black and American Indian and Alaska Native people. Cancer patients are also being diagnosed younger, which may have different life impacts. Additionally, colorectal cancer deaths have risen from the fourth cause of cancer deaths in the 1990s for both males and females under 50 years of age to number one cause of cancer death in men and number two cause of cancer death in women. <u>Read the</u> <u>Press Release</u>

This year's report also includes a special section: Cancer in People Who Identify as Lesbian, Gay, Bisexual, Transgender, Queer or Gender-nonconforming (LGBTQ+).

STUDY Melanoma Incidence Among American Indian/Alaska Native People

Non-Hispanic American Indian/Alaska Native people have the second highest incidence of melanoma, the most serious and deadly skin cancer type, after non-Hispanic white people. A recent study using population-based cancer registry data linked to Indian Health Service database examined trends from 1999-2019. Rates were highest among men aged 55 years and older and people living in the Southern Plains and Pacific Coast region.

RESOURCE Cardiovascular Testing Rates Low Among Adult Survivors of Childhood Cancer

A recent study in *JAMA Network Open*, found that many adult survivors of childhood cancer are not regularly screened by primary care providers for for cardiovascular disease, despite survivors being at increased risk of cardiovascular disease. Additionally, documentation of cancer history is not always included, indicating opportunities for improvement in documentation and screening. <u>Read the</u> <u>Healio Article</u>

RESOURCE Chronic Health Risk for LGB AYA Cancer Survivors

According to self-reported data from the cross-sectional National Health Interview Survey (2013-2020), lesbian, gay, and bisexual (LGB) adolescent and young adult (AYA) cancer survivors reported an increased risk of at least one chronic health conditions (71%) compared with LGB individuals without a history of cancer (51%) and heterosexual cancer survivors (59%).
