

LUNG & BRONCHUS CANCER

THE TOP CAUSE OF CANCER DEATH IN WISCONSIN

This year, more than
4,600
people will be diagnosed
with lung & bronchus
cancer in Wisconsin.

23%

of all cancer deaths in
Wisconsin are due to
lung & bronchus cancer.

That's **more deaths** than
from breast, prostate, and
colorectal cancers **combined**.

Only 1 in 10 people
at high risk for
lung cancer are screened.

Ask your healthcare provider
if screening is right for you.

WE CAN DECREASE LUNG & BRONCHUS CANCER IN WISCONSIN BY:

Eliminating
exposure to
secondhand
smoke

Reducing access
to commercial
tobacco products

Reducing
exposure to
radon gas

Promoting
recommended lung
cancer screenings

Commercial tobacco means
harmful products that are **made and
sold by tobacco companies**.

It **does not include "traditional tobacco"** used by
Indigenous groups for religious or ceremonial purposes.

Ready to stop
using commercial
tobacco?

For free support, call
1-800-QUIT-NOW
(1-800-784-8669).

People in Wisconsin **may
also be at risk for lung
cancer due to radon**, an
odorless gas that can leak
into your home.

The best way to protect
yourself is to test your
home. For help, call
1-888-LOW-RADON
(1-888-569-7236).
